

## 2. Visualizing time series data

### AIM:

To implement programs for visualizing time series data.

### PROCEDURE:

**Loading Data:** We load the CSV file using `pd.read_csv("supermarket_sales.csv")`.

**Converting Date Column:** The 'Date' column is converted to `datetime` format using `pd.to_datetime()`, so it can be used properly as the x-axis in the plot.

**Setting Date as Index:** We set the `Date` column as the index to make it easier for time series plotting and analysis.

**Plotting Sales:** A line plot is generated using `matplotlib` to visualize sales over time. The `Date` will be plotted on the x-axis, and `Sales` will be plotted on the y-axis.

**Customizing the Plot:** We rotate the x-axis labels (`plt.xticks(rotation=45)`) for better readability. Adding `plt.grid(True)` makes the graph easier to interpret with gridlines.

### CODE:

```
# Import libraries
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns

# Load in the CSV file (adjust the file path accordingly)
sales_data = pd.read_csv(r"C:\Users\Lenovo\Downloads\supermarket_sales - Sheet1.csv")

# Check the first few rows of the dataset
print(sales_data.head())

# Convert the 'Date' column to datetime format
sales_data['Date'] = pd.to_datetime(sales_data['Date'])
```

```
# Set the 'Date' column as the index for time series analysis
sales_data.set_index('Date', inplace=True)

# Check for missing values
print(sales_data.isnull().sum())

# Create a line plot of sales data over time
plt.figure(figsize=(10, 6))
# Access the correct sales column, likely 'Total' or 'sales'
plt.plot(sales_data.index, sales_data['Total'], label='Sales (USD)', color='b')
plt.xlabel('Date')
plt.ylabel('Sales (USD)')
plt.title('Supermarket Sales Over Time')
plt.grid(True)
plt.xticks(rotation=45)
plt.tight_layout()
plt.legend()
plt.show()
```

## **1. Line Plot with Multiple Series**

```
sales_by_product = sales_data.groupby([sales_data.index, 'Product
line'])['Total'].sum().unstack()

# Plot the sales for each product over time
plt.figure(figsize=(12, 6))
sales_by_product.plot(kind='line')
plt.title('Sales by Product Over Time')
plt.xlabel('Date')
plt.ylabel('Sales (USD)')
plt.grid(True)
plt.xticks(rotation=45)
plt.tight_layout()
plt.legend(title='Product')
plt.show()
```

## 2. Heatmap

```
# Plot the heatmap
plt.figure(figsize=(12, 6))
sns.heatmap(sales_pivot, cmap='YlGnBu', annot=True, fmt='.0f', linewidths=.5)
plt.title('Sales Heatmap by Product and Date')
plt.xlabel('Product')
plt.ylabel('Date')
plt.xticks(rotation=45)
plt.tight_layout()
plt.show()
```

## 3. Bar Plot (Grouped by Category)

```
# Group by store and sum sales
sales_by_store = sales_data.groupby('Branch')['Total'].sum()

# Plot the bar plot
plt.figure(figsize=(8, 6))
sales_by_store.plot(kind='bar', color='skyblue')
plt.title('Total Sales by Store')
plt.xlabel('Store')
plt.ylabel('Sales (USD)')
plt.tight_layout()
plt.show()
```

**OUTPUT:**

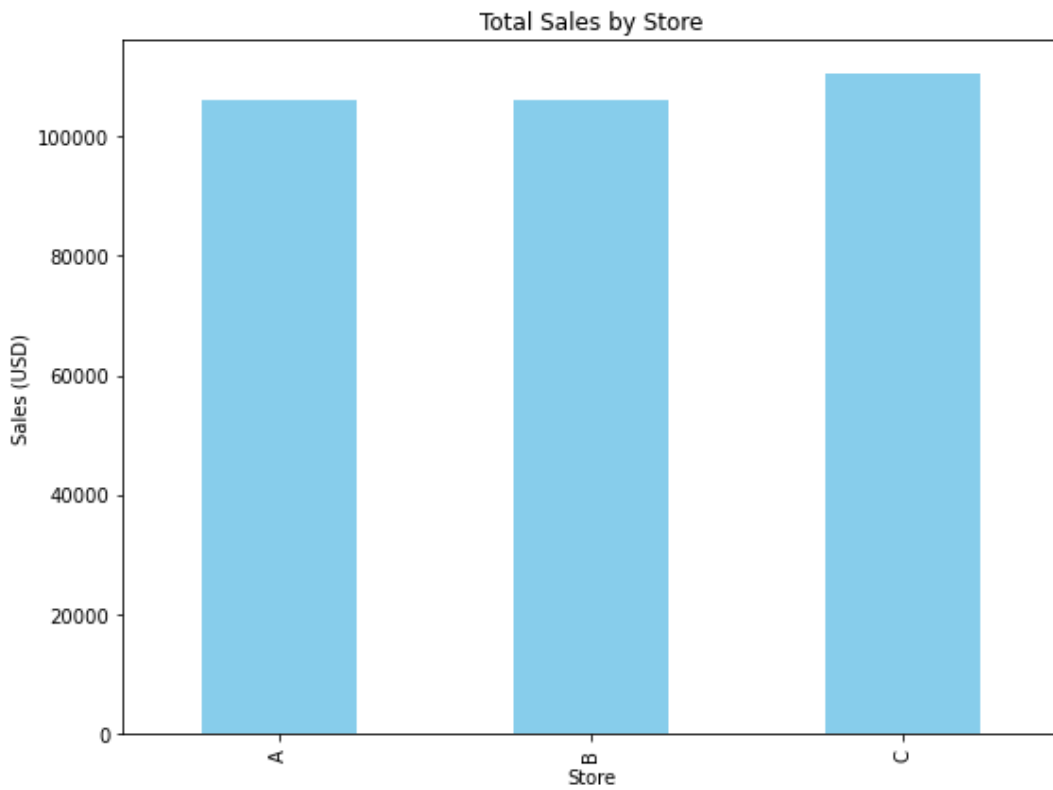

|   | Invoice ID  | Branch | City      | Customer type | Gender | \ |
|---|-------------|--------|-----------|---------------|--------|---|
| 0 | 750-67-8428 | A      | Yangon    | Member        | Female |   |
| 1 | 226-31-3081 | C      | Naypyitaw | Normal        | Female |   |
| 2 | 631-41-3108 | A      | Yangon    | Normal        | Male   |   |
| 3 | 123-19-1176 | A      | Yangon    | Member        | Male   |   |
| 4 | 373-73-7910 | A      | Yangon    | Normal        | Male   |   |

|   | Product line           | Unit price | Quantity | Tax 5%  | Total    | Date      | \ |
|---|------------------------|------------|----------|---------|----------|-----------|---|
| 0 | Health and beauty      | 74.69      | 7        | 26.1415 | 548.9715 | 1/5/2019  |   |
| 1 | Electronic accessories | 15.28      | 5        | 3.8200  | 80.2200  | 3/8/2019  |   |
| 2 | Home and lifestyle     | 46.33      | 7        | 16.2155 | 340.5255 | 3/3/2019  |   |
| 3 | Health and beauty      | 58.22      | 8        | 23.2880 | 489.0480 | 1/27/2019 |   |
| 4 | Sports and travel      | 86.31      | 7        | 30.2085 | 634.3785 | 2/8/2019  |   |

|   | Time  | Payment     | cogs   | gross margin percentage | gross income | Rating |

| Rating                  | 0 |
| dtype: int64            |   |

## RESULT:

The visualizing time series data program was executed successfully.
